MidExam-I by TA 鄭凱仁

■ 題目敘述:

助教想要領養一隻狗狗,可是沒有教過的狗狗只會肚餓亂叫,還有亂大便,還有把家裡搞得亂七八糟,首先,寵物取了個名子,助教希望你們可以教他說自己肚子餓了,還有教他說自己想大便了,還有不准他弄亂家裡,外加學會握手

- 要求(這才是題目):
 - 原來的 dog class 如下(不能動)

```
package yourID;
 2
 3 public class dog {
       private int weight;
4
       private String gender;
5
 6
7⊝
       dog(int w, String g){
           weight = w;
8
9
           gender = g;
           System.out.println("Woof!! Woof!!");
10
       }
11
12
13⊖
       void Hungry(){
14
           System.out.print("Woof!! Woof!! Woof!!");
15
       }
16
17⊜
       void Poo(){
           System.out.println("Shit on the floor...");
18
19
       }
20
       void MessUp(){
21⊖
           System.out.println("Your house is destroyed");
22
23
       }
24
25 }
26
```

請用繼承(extends)的方式寫一個新的 class MyPetDog,並且

- 改寫(override)下面這幾個 Method
 - Hungry
 - Poo
 - MessUp
- 新增
 - MyPetDog 的 Constructor 讓名子-開始就可以初始化
 - ShakeHand 功能

助教的 Main 檔(不能動)如下:

```
🚺 *Play.java 🛭 🔎 dog.java
MyPetDog.java
  1 package yourID;
  3 public class Play {
  4
 5⊜
        public static void main(String[] args) {
            MyPetDog kkdog = new MyPetDog("kkman", 5, "boy");
  6
 7
            kkdog.Hungry();
 8
            kkdog.Poo();
 9
            kkdog.MessUp();
            kkdog.ShakeHand("Right Hand");
 10
 11
        }
 12
 13
```

執行結果如下:

```
Woof!! Woof!!
Woof!! Woof!! I am hungry, feed me!!
I wnat to poo~
Good dog doesn't mess up.
My name is kkman
Right Hand, shake~ shake~
```
